1. EUPHA update

EUPHA joins the UK Faculty of Public Health in expressing concerns on the negative impact on health of the Transatlantic Trade and Investment Partnership (TTIP)

The UK Faculty of Public Health (FPH) and the European Public Health Association (EUPHA) are calling on the EU to oppose the Transatlantic Trade and Investment Partnership (TTIP), a proposed free trade agreement between the European Union and United States.

Professor Martin McKee, President of EUPHA, said: "TTIP will take the power to make decisions away from democratically elected politicians and put it in the hands of a mechanism that is beyond public scrutiny and outside the UK court system. EUPHA and FPH are calling on the European Union to put health before profit and reject TTIP. We need healthy communities for economic growth."

<http://www.eupha.org/advocacy-by-eupha>

EUPHA has concerns on the proposed EU Trade Secrets Directive

On 25 March 2015, EUPHA issued a statement to join the concerns of the Corporate Europe Observatory, Medicines in Europe Forum, and the International Society of Drug Bulletins with regard to the draft EU Directive on Trade Secrets.

More specifically, we share the concern of these organisations that: a) The Directive employs an excessively broad definition of "trade secrets", including scientific data that is in the public interest. In particular, it does not allow for the exclusion of scientific data whose disclosure is in the public interest, such as health-related regulatory data.

b) It shifts documents that are currently in the public domain to the trade secrets domain, thereby constraining the scope to expose actions that could impact negatively on public health.

c) It has an impact on the right to freedom of expression and information.

EUPHA Section SSH has a new name

The EUPHA Section on Social Security and Health has changed its name to better reflect its area of expertise. As of 20 March, the section is now named: EUPHA Section on Social Security, Work and Health.

March Newsletter of the EUPHA section HSR

The EUPHA section on Health Services Research has published its March newsletter.

<http://www.eupha.org/repository/sections...>

Survey on 'what is good public health practice'

The EUPHA Practice Pillar lead would like to invite those interested to join the survey on 'what is good public health practice'. There are many public health practices in Europe but sometimes they are not known by potentially interested professionals and, most importantly, there is not an explicit and shared definition of the characteristics of a 'good public health practice'. There are several EU projects focused on classifying and sharing good practices, for instance in patient safety, but the specificity of Public Health programmes requires a tailored definition. This effort could be considered a preliminary step in the perspective of facilitating the sharing of experiences within Europe and of promoting a widespread culture on how to design and implement 'good public health good practices' among European professionals.

The EUPHA practice pillar is the ideal setting to start such an initiative and a first step could be trying to set up some basics elements through a survey, which includes:

- Exploring the interest of EUPHA members on this topic;
- Analysing the existing documents and programmes including a definition of a public health "good" and/or "best" practice and, if existing, the criteria adopted; and
- Collecting inventories of public health practices.

Based on this survey and existing experiences, possible definitions and criteria of good public health practice could be elaborated to be agreed by the European public health community.

Those interested to join this survey are invited to send an email to office@eupha.org

2. European Public Health Conference

Glasgow 2014 - New Eurohealth on Reducing inequalities in health and health care

This Eurohealth issue provides a reflection on the 7th European Public Health Conference which was held in late 2014 in Glasgow. Articles in the Observer section look specifically at health inequalities - How Roma communities are responding to these; adaptation of health promotion and disease prevention interventions for migrant and ethnic minority populations; and the Glasgow Declaration. Other articles include: Learning from each other - where health promotion meets infectious diseases; Public health monitoring and reporting; Changing your health behaviour - regulate or not; Developing the public health workforce; Building sustainable and resilient health care systems; Leaving a legacy in Glasgow; Conclusions; and Eurohealth Monitor.

http://www.euro.who.int/__data/assets/pd...

Milan 2015 - 8th European Public Health Conference

Plenary programme

We are excited to inform you that the plenary programme is taking shape. Confirmed keynote speakers include:

- Sir Andy Haines, London School of Hygiene and Tropical Medicine, UK
- Dr Mengistu Asnake, president of the World Federation of Public Health Associations, Ethiopia
- Prof. Tim Lang, City University London's Centre for Food Policy, UK
- Dr Armin Fidler, President EHMA and World Bank
- Prof. Martin McKee, President EUPHA

Abstract submission

Abstract and workshop submission is still open until 1 May 2015 (midnight CET). The EPH Conference is inviting abstracts for workshops and single presentations (oral, pitch and posters). The programme offers the traditional 10-minutes presentations and poster presentations in the designated poster area. Following the very successful introduction in Glasgow, we will increase the number of pitch presentation sessions in Milan. Pitch presentations are 5-minutes, with 2 minutes of discussion time in 60-minutes sessions. More information: <http://www.ephconference.org/2015-milan-abstract-submission-151>

3. Call for proposals, job opportunities

Professorship in Social Pharmacy at the University of Copenhagen

Deadline for the application is 6 April 2015.

<http://jobportal.ku.dk/videnskabelige-st...>

Call for papers on e-cigarettes

Special issue on E-cigarettes - International Journal of Public Health

It is currently very challenging for public health authorities to make informed decisions about how to react to the increasing popularity of E-cigarettes and related products. We know very little about the epidemiology of its use, its impact on users and on the environment, the association between the use of E-cigarettes and consumption of regular cigarettes, the corporate relationships between the tobacco

industry and E-cigarette promoters, and the relevance, effectiveness and acceptability of alternate public health responses to the use and dissemination of such products, locally, nationally and internationally. Briefly stated we urgently need primary research documenting the epidemiology of e-cigarette use, the impact of its use and the effects of alternate public health responses to the popularity of these products.

The [International Journal of Public Health](http://www.springer.com/public+health/journal/38) invites authors to submit papers (Original Articles, or Reviews) that provide evidence that public health should or should not be concerned with vapor delivery systems for nicotine such as E-cigarettes, and what constitutes an appropriate public health response. While we invite a broad range of topics and perspectives, papers that address issues of social inequality and cultural diversity are particularly welcome. Please do not submit opinion and discussion articles. Manuscripts can be submitted online through the Journal's website <http://www.springer.com/public+health/journal/38>. Authors should mention that the submission refers to this Call.

Closing date for submissions: 15 May 2015

Physicians with a PhD, specialised in community medicine: 2 tenured positions

(two positions, 70-100% each)

The unit Community and Occupational Medicine of the University Medical Center Groningen (UMCG) is looking for two physicians with a PhD-degree or corresponding qualification, and an orientation on community medicine and epidemiology. Candidates will have to extend research regarding community health problems in youth and elderly nationally and internationally, and to deliver education on community health and health research. Societal challenges and public health issues are at the core of the unit's activities. Personal plans regarding these challenges are appreciated.

UMCG - Community and Occupational Medicine is highly successful in research on prevention and societal participation. It hosts a series of collaborative centers with community and occupational health services. Moreover, it has a longstanding research cooperation with Central Europe and with a number of international partners. The unit provides education to medical and epidemiology students.

The two positions are tenured, 70-100% each. One also comprises coordination of the research cooperation with Central Europe, the other the coordination of teaching in community medicine.

Further conditions depend on the qualifications and track record of the candidate, including arrangement needed to move families. Applications have to comprise the following documents, written in English or Dutch:

- A motivation letter
- CV and scientific merits

Applications can be submitted via the recruitment system of the UMCG at s.a.reijneveld@umcg.nl

4. Interesting News

Agreement on best estimates of breast cancer overdiagnosis urgently needed to inform women

More than any other debate about overdiagnosis, the discussion of breast cancer has spilt from the pages of the specialist medical press into the public domain, argues a public health expert, stating that changing screening policy "should be based on demonstrated ability to achieve equivalent benefit to harm ratios and not on the assumption that increased detection will achieve a net benefit."

<http://www.sciencedaily.com/releases/201...>

Global economic impact of diabetes revealed in new study

Diabetes reduces people's employment chances and wages around the world, according to a new study. Researchers studied the economic impact of type II diabetes worldwide, and were surprised to find not only a large cost burden in high-income countries, but also in low and middle-income countries - where people with diabetes and their families face high costs for treatment. While it is widely known that diabetes poses a huge health challenge, awareness of its impact on the global economy and labor markets has never before been studied in such detail.

<http://www.sciencedaily.com/releases/201...>

'Cardiovascular revolution' has increased life expectancy in Spain

Over the last century, life expectancy for Spaniards has increased by 40 years. A study highlights the main cause, since 1980, as being the reduced incidence of cardiovascular diseases while other pathologies, such as mental illnesses and certain types of cancer, have been seen to rise. The authors predict that the effects of the economic recession on mortality will show up in the long-term.

Improving inmate health can lead to better community health, safety

If prisoners received better health care while behind bars and after release, both their health and the community's health would improve, new research has found.

Offering treatment to prisoners or by linking them to community-based family physicians and psychiatrists after they are released leads to less substance abuse, mental health problems, chronic diseases and health service utilization, as well as a reduced spread of infectious diseases, according to a systematic review published today in the *American Journal of Public Health*.

<http://www.sciencedaily.com/releases/201...>

Experts call for a tobacco-free world by 2040

Leading public health researchers today call for the sale of tobacco to be phased out by 2040, showing that with sufficient political support and stronger evidence-based action against the tobacco industry, a tobacco-free world -- where less than 5 percent of adults use tobacco -- could be possible in less than three decades.

<http://www.sciencedaily.com/releases/201...>

Received wisdom about mental illness challenged by new report

A new report challenges received wisdom about the nature of mental illness and has led to widespread media coverage and debate in the UK. Many people believe that schizophrenia is a frightening brain disease that makes people unpredictable and potentially violent, and can only be controlled by medication. However the UK has been at the forefront of research into the psychology of psychosis conducted over the last twenty years, and which reveals that this view is false.

Electronic cigarette vapors contain toxins, have potential to be a public health concern

On the heels of the Federal Drug Administration's (FDA) second public workshop to explore the public health considerations associated with e-cigarettes, nonprofit research organization RTI International released a new research paper "Exhaled Electronic Cigarette Emissions: What's Your Secondhand Exposure?," which explores the composition of e-cigarette vapor and the potential health impacts of secondhand exposure.

<http://www.sciencedaily.com/releases/201...>

Watching e-cig ads may increase the urge to smoke, study says

Seeing commercials for electronic cigarettes can increase the urge to smoke traditional cigarettes, [a new study](#) suggests.

Researchers at the Annenberg School for Communication at the University of Pennsylvania discovered that watching advertisements that showing vaping can increase the desire of current and former smokers to pick up a conventional cigarette. In the new study, published in the journal *Health Communication*, the researchers assessed the urge to smoke among 301 daily smokers, 272 intermittent smokers and 311 former smokers. They then had the participants watch three e-cigarette commercials. Some of the commercials showed vaping, and others did not.

11. WHO news

What do we know about the strengths and weakness of different policy mechanisms to influence health behaviour in the population?

With health care systems under increasing pressure the development of a well defined and effective public health strategy has never been more important. Many health problems are potentially avoidable

and governments have long had tools at their disposal to influence population health and change individual behaviours, directed both 'upstream' at some of the underlying causes of poor health, as well as at 'downstream' challenges when poor health behaviours are already manifest. But how effective are these different actions? This policy summary briefly maps out what is known about some of these mechanisms, including approaches that have come to recent prominence from behavioural economics and psychology. Combinations of taxation, legislation and health information remain the core components of any strategy to influence behavioural change. There remain many unanswered questions on how best to design new innovative interventions that can complement, and in some instances augment, these well-established mechanisms.

<http://www.euro.who.int/en/about-us/partners/observatory/publications/policy-briefs-and-summaries/what-do-we-know-about-the-strengths-and-weakness-of-different-policy-mechanisms-to-influence-health-behaviour-in-the-population>

Uzbekistan and the challenge of reform

Since the country's independence in 1991, Uzbekistan has embarked on several major health reforms, which included changes to health financing and the primary health care system. The country has also retained some features of the Soviet period, as most health care providers are still publicly owned and administered and health workers are government employees. Health expenditure is comparatively low when compared to the rest of the WHO European Region. The government has increased public expenditure on health in recent years, but private expenditure in the form of out-of-pocket payments remains substantial. The government has implemented a basic benefits package, but, for most people, this does not include secondary or tertiary care and outpatient pharmaceuticals. This new health system review (HiT) on Uzbekistan examines the changes and reforms that have taken place and the challenges that still remain.

Health literacy toolkit for low- and middle-income countries: series of information sheets to empower communities and strengthen health systems

The World Health Organization – Regional Office for South-East Asia. New Delhi; 2015

This series of information sheets introduces health literacy, its relevance to public policy, and the ways it can be used to inform the promotion of good health, the prevention and management of communicable and noncommunicable diseases, and the reduction of health inequities. It provides information and links to further resources to assist organizations and governments to incorporate health literacy responses into practice, service delivery systems, and policy. This publication seeks to inform: governments, politicians and policy makers at all levels; academic institutions; public, civil society, and non-governmental organizations; and practitioners; relevant private sectors promoting health and well-being; communities, community-based organizations and social networks; WHO and other UN partners and development organizations.

New publications issues by WHO – March 2015

[Guidelines for the Identification and Management of Substance Use and Substance Use Disorders in Pregnancy](#)

These guidelines have been developed to enable professionals to assist women who are pregnant, or have recently had a child, and who use alcohol or drugs or who have a substance use disorder, to achieve healthy outcomes for themselves and their fetus or infant.

[WHO Classification of Tumours of the Lung, Pleura, Thymus and Heart. Fourth edition](#)

WHO Classification of Tumours of the Lung, Pleura, Thymus and Heart is the seventh volume in the 4th Edition of the WHO series on histological and genetic typing of human tumours. This authoritative, concise reference book provides an international standard for oncologists and pathologists and will serve as an indispensable guide for use in the design of studies monitoring response to therapy and clinical outcome.

[Guide to monitoring and evaluation for collaborative TB/HIV activities -- 2015 update](#)

This guide is developed to assist TB and HIV programme managers and other stakeholders in monitoring and evaluation for collaborative TB/HIV activities. It is intended to facilitate collection of standardized data and to help in interpretation and dissemination of these data for programme improvement at national and subnational level.

[Bulletin of WHO Vol. 93, No. 03, 2015](#)

This flagship periodical of WHO, the Bulletin is a leading international voice on public health issues. This peer-reviewed monthly draws on the expertise within WHO to provide a vital resource for those interested in research, policy issues and debate on international public health, particularly the problems confronting developing countries.

[WHO Drug Information, Vol. 28 No. 4, 2014](#)

WHO Drug Information communicates pharmaceutical information that is either developed and issued by WHO or transmitted to WHO by research and regulatory agencies throughout the World. The journal also includes regular presentations of newly proposed and recommended International Nonproprietary Names (INN) for Pharmaceuticals Substances. This volume contains the proposed INN List No. 112.
